## Volume 120 · Numbers 1 to 3 · 1995

**RESEARCH ARTICLES**

**Hillgruber, N., Haldorson, L. J., Paul, A. J.**
Feeding selectivity of larval walleye pollock *Theragra chalcogramma* in the oceanic domain of the Bering Sea 1–10

**Fortier, L., Ponton, D., Gilbert, M.**
The match/mismatch hypothesis and the feeding success of fish larvae in ice-covered southeastern Hudson Bay 11–27

**Tarling, G. A., Ward, P., Sheader, M., Williams, J. A., Symon, C.**
Distribution patterns of macrozooplankton assemblages in the southwest Atlantic 29–40

**Gómez-Gutiérrez, J., Palomares-García, R., Gendron, D.**
Community structure of the euphausiid populations along the west coast of Baja California, Mexico, during the weak ENSO 1986–1987 41–51

**Landry, M. R., Kirshtein, J., Constantinou, J.**
A refined dilution technique for measuring the community grazing impact of microzooplankton, with experimental tests in the central equatorial Pacific 53–63

**Millie, D. F., Kirkpatrick, G. J., Vinyard, B. T.**
Relating photosynthetic pigments and *in vivo* optical density spectra to irradiance for the Florida red-tide dinoflagellate *Gymnodinium breve* 65–75

**Laurion, I., Demers, S., Vézina, A. F.**
The microbial food web associated with the ice algal assemblage: biomass and bacterivory of nanoflagellate protozoans in Resolute Passage (High Canadian Arctic) 77–87

**Kellogg, C. A., Rose, J. B., Jiang, S. C., Thurmond, J. M., Paul, J. H.**
Genetic diversity of related vibriophages isolated from marine environments around Florida and Hawaii, USA 89–98

**Frenette, J.-J., Vincent, W. F., Dodson, J. J., Lovejoy, C.**
Size-dependent variations in phytoplankton and protozoan community structure across the St. Lawrence River transition region 99–110

**Malej, A., Mozetič, P., Malačič, V., Terzić, S., Ahel, M.**
Phytoplankton responses to freshwater inputs in a small semi-enclosed gulf (Gulf of Trieste, Adriatic Sea) 111–121

**Tamminen, T.**
Nitrate and ammonium depletion rates and preferences during a Baltic spring bloom 123–133

**Baldwin, B. S., Newell, R. I. E.**
Relative importance of different size food particles in the natural diet of oyster larvae *Crassostrea virginica* 135–145

**Lasiak, T. A., Barnard, T. C. E.**
Recruitment of the brown mussel *Perna perna* onto natural substrata: a refutation of the primary/secondary settlement hypothesis 147–153

**Hoare, K., Beaumont, A. R., Davenport, J.**
Variation among populations in the resistance of *Mytilus edulis* embryos to copper: adaptation to pollution? 155–161

**Hoare, K., Davenport, J., Beaumont, A. R.**
Effects of exposure and previous exposure to copper on growth of veliger larvae and survivorship of *Mytilus edulis* juveniles 163–168

**Devescovi, M., Lucu, Č.**
Seasonal changes of the copper level in shore crabs *Carcinus mediterraneus* 169–174

**Petersen, J. K., Schou, O., Thor, P.**
Growth and energetics in the ascidian *Ciona intestinalis* 175–184

**Mazel, C. H.**
Spectral measurements of fluorescence emission in Caribbean cnidarians 185–191

**Hunter, E., Hughes, R. N.**
Environmental and genetic components of variation in sexual allocation by an epialgal bryozoan 193–201

**Alcoverro, T., Duarte, C. M., Romero, J.**
Annual growth dynamics of *Posidonia oceanica*: contribution of large-scale versus local factors to seasonality 203–210

**Roméo, M., Gnassia-Barelli, M., Juhel, T., Meinesz, A.**
Memorization of heavy metals by scales of the seagrass *Posidonia oceanica*, collected in the NW Mediterranean 211–218

**Turner, S. J., Thrush, S. F., Pridmore, R. D., Hewitt, J. E., Cummings, V. J., Maskery, M.**
Are soft-sediment communities stable? An example from a windy harbour 219–230

**Kharlamenko, V. I., Zhukova, N. V., Khotimchenko, S. V., Svetashev, V. I., Kamenev, G. M.**
Fatty acids as markers of food sources in a shallow-water hydrothermal ecosystem (Kraternaya Bight, Yankich Island, Kurile Islands) 231–241

**Manté, C., Dauvin, J.-C., Durbec, J.-P.**
Statistical method for selecting representative species in multivariate analysis of long-term changes of marine communities. Applications to a macrobenthic community from the Bay of Morlaix 243–250

**Vetter, E. W.**
Detritus-based patches of high secondary production in the nearshore benthos 251–262

**Taylor, D. I., Allanson, B. R.**
Organic carbon fluxes between a high marsh and estuary, and the inapplicability of the Outwelling Hypothesis 263–270

**Osgood, D. T., Santos, M. C. F. V., Zieman, J. C.**
Sediment physico-chemistry associated with natural marsh development on a storm-deposited sand flat 271–283

**REVIEW**

**Kiørboe, T., Sabatini, M.**
Scaling of fecundity, growth and development in marine planktonic copepods 285–298

**NOTE**

**Karakassis, I.**
$S_{\infty}$: a new method for calculating macrobenthic species richness 299–303

**COMBINED AUTHOR AND TITLE INDEX**
Volumes 111–120 (1994–1995) 305–317

# MARINE ECOLOGY PROGRESS SERIES

**HISTORY:** Marine Ecology Progress Series (MEPS) was established in response to requests from numerous marine ecologists from all over the world. When founded, MEPS was based on 'Marine Ecology' – the first comprehensive, integrated treatise on life in oceans and coastal waters – conceived, organized and edited by Professor Otto Kinne, and published by John Wiley & Sons.

**AIM:** MEPS serves as a world-wide forum for all aspects of marine ecology, fundamental and applied. The journal covers: microbiology, botany, zoology, ecosystem research, biological oceanography, ecological aspects of fisheries and aquaculture, pollution, environmental protection, conservation, resource management.
Ecological research has become of paramount importance for man's future. The information presented here should, therefore, encourage critical application of ecological knowledge for the benefit of mankind and, in fact, of life on earth. Marine Ecology Progress Series has received recognition as the leader in its field. The journal strives for

- complete coverage of the field of marine ecology
- the highest possible quality of scientific contributions
- quick publication
- a high technical standard of presentation.

**SCOPE:** MEPS is international and interdisciplinary. It presents rigorously refereed and carefully selected research articles, reviews and notes, as well as comments, concerned with:

**Environmental Factors:** Tolerances and responses of marine organisms (microorganisms, autotrophic plants, and animals) to variations in abiotic and biotic components of their environment; radioecology.

**Physiological Mechanisms:** Synthesis and transversion of organic material (mechanisms of auto- and heterotrophy); thermo-, ion-, osmo- and volume-regulation; stress resistance; non-genetic and genetic adaptation; population genetics; orientation in space and time; migrations; behavior; molecular basis of ecological processes.

**Cultivation:** Maintenance and rearing of, as well as experimentation with, marine organisms under environmental and nutritional conditions which are, to a considerable degree, controlled; analysis of the physiological and ecological potential of individuals, populations and species; determination of nutritional requirements; ecological aspects of aquaculture; water-quality management; culture technology.

**Dynamics:** Production, transformation, and decomposition of organic matter; flow patterns of energy and matter as these pass through organisms, populations and ecosystems; biodiversity; variability of ecosystem components; trophic interrelations; population dynamics; plankton ecology; benthos ecology; estuarine and coastal ecology; wadden-sea ecology; coral reef ecology; deep-sea ecology; open-ocean ecology; polar ecology; theoretical ecology; ecological methodology; ecological modelling and computer simulation.

**Ocean Management:** Human-caused impacts: their role as modifiers and deformers of living systems, their biological consequences and their management and control; inventory of living resources in coastal areas, estuaries and open oceans; ecological aspects of fisheries; pollution of marine areas and organisms; protection of life in the seas; management of populations, species and ecosystems; management of coastal zones and sea areas; biotechnology.

Scientific publications appearing in this journal have been rigorously refereed, carefully quality-improved, and professionally selected by our editorial staff. These publications, and all parts thereof, are protected by copyright. This covers the exclusive rights of the publisher to *reproduce* (by any means, including photographic or electronic), to *distribute* (including via photocopies, reprints, or electronic means), and to *store* on microfilm, in electronic data bases, on video disks, etc., this material. The acceptance regulations of a manuscript for publication automatically include the consent of the author(s) to transfer the copyright to the publisher. Permission for exceptions to these rules must be obtained in writing from the publisher at the time of manuscript submission.
In the USA, photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee (US $3.00 per article) is paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA.

Publisher, editors and authors do not accept legal responsibility for errors, omissions or claims, nor do they provide any warranty, express or implied, with respect to information published in MEPS.

*Tables of contents* and *tables of contents with abstracts* for MEPS are available free of charge on the Internet via World Wide Web (http://www.int-res.com/int-res).
